introducing: EP/BC–1 professional CD player

teenage engineering announces the EP/BC–1, a modern take on a classic CD player and the first entry in their new broadcast series.

the broadcast series, which reintroduces physical audio formats into a modern context, evolved from a shared obligation within the company to preserve the formats they grew up with.

the BC–1 updates the traditional CD player with bluetooth and auracast streaming, USB output, and a rechargeable battery. control playback using varispeed, cue points, a dial pad, and the jog stick to give new life to your CD collection.

whether you're a casual listener looking to rekindle a relationship with an old CD collection, or a new user who wishes to develop a more tangible connection with music, the BC–1 is made for you.

the BC–1 is an extended member of the EP–series and shares the same dimensions as the K.O. II. this means it can easily be paired, attached, or used with any EP unit. attaching it to the K.O.–AMP creates a portable playback system.

tech specs

- varispeed playback control (50–150%)
- cue markers and jog wheel for forward and reverse search
- built-in beat detection with tempo sync out
- bluetooth and auracast audio streaming
- digital display with track, index and time information
- digital VU meters
- stereo line out and headphone out
- USB 2.0 digital audio output
- rip cd tracks to USB as 44.1 kHz / 16-bit WAV files
- MP3 data disc playback
- built-in rechargeable battery with USB charging
- includes the starter compact disc

about teenage engineering
teenage engineering is developing the alternative future of consumer electronics —each invention driven by need and made to last.

since 2007, teenage engineering has dispatched a series of products that earned their spot as studio essentials for the acclaimed artists, producers, and instrumentalists we all know and admire.

from OP–1 field to pocket operators®, OP–XY to OD–11, they have applied their signature mindset to building a new legacy of technology that continues to shape the industry as we know it.

their hq is located in stockholm, sweden, where a multidisciplinary team of software, electrical, and mechanical engineers and industrial designers are developing their products from start to finish. the studio is a fully equipped workshop with state-of-the-art rapid prototyping machines.
